

# CHRISTOPHER S. CORLEY, PhD

<https://christop.club> <https://github.com/cscorley>

cscorley@ua.edu Chattanooga, TN, USA

## SKILLS

- .NET
  - C#
  - Framework & Core
  - ASP.NET WebAPI
  - VB.NET
- Python
  - Flask
  - Django
  - numpy
  - Jupyter Notebooks
- SQL
- JavaScript
  - Node
  - React
  - Vue
- Rust (beginner)
- Git
- Elasticsearch
- MongoDB
- RabbitMQ
- IIS
- New Relic
- GNU/Linux
- Windows Server
- Azure DevOps

## EDUCATION

### PhD, Computer Science

University of Alabama  
May 2018

*Online Topic Modeling For  
Software Maintenance Using A  
Changeset-Based Approach*

### MS, Computer Science

University of Alabama  
August 2014

### BS, Computer Science

University of North Alabama  
May 2011

## PROFESSIONAL EXPERIENCE

### Coyote Logistics, Lead Software Engineer

August 2019 – present | Chattanooga, TN, USA

- Manage deployments and releases of products owned by team
- Moved team from Scrum-style sprints to Kanban
- Project planning and requirements gathering. Create and document work to be completed. Explore and make development plans for team to execute
- Pair programming to resolve development blocks and debugging issues. Mentoring on test writing, refactors, and experimentation of code changes.
- Designed and mentored changes for implementing Elasticsearch script-based updates of time-critical and continuously updated data fields
- Lead projects that overhauled company location search functionality with Elasticsearch solution that replaced SQL-based queries with flexible type-ahead and fuzzy location searching. Implemented data collection for determining metrics on actual user search results and selections
- Lead project in converting in-memory caching to Azure-hosted Redis cache
- Converted team build pipeline infrastructure to YAML-based Azure DevOps
- Build and maintain Kibana dashboards for Logstash logging

### Coyote Logistics, Senior Software Engineer

April 2019 – August 2109 | Chattanooga, TN, USA

- Productionalized a data-science model in Python with Flask. Improved model training efficacy, model deployment, and prediction robustness.
- Designed, implemented, and documented service changes that moved Elasticsearch clients to secure-connection clusters
- Designed, implemented, dogfooded, and documented an internal NuGet library for Elasticsearch index management. Provides de facto implementations and patterns for the company that allows teams to rapidly develop and deploy Elasticsearch-based applications.
- Installed and maintained Developer and QA Elasticsearch clusters

### Coyote Logistics, Software Engineer

February 2016 – April 2019 | Chattanooga, TN, USA

- Designed and implemented Elasticsearch-based services to replace SQL searching and reports. Service A/B architecture accounted for Elasticsearch index changes, removing service maintenance windows and allowing for continuous deployment
- Decoupled all existing Elasticsearch clients from direct connections to clusters to use services instead
- Single-handedly upgraded company dependencies on Elasticsearch 1 to Elasticsearch 5 and introduced architecture and development patterns for gradual upgrades on future major versions

## OTHER EXPERIENCE

### Open-source projects

- whatthepatch: Python diff/patch parsing library, owner
- Gensim: Python topic modeling library, core contributor

### Research instrumentation

- Language-agnostic source code parser using ANTLR4 grammars. Java, XML
- Application for source code search using linguistic similarity rather than keywords. Python

- Reformulated critical Elasticsearch queries that brought mainline application query time from 30 seconds to sub-second searches
- Designed and implemented Elasticsearch jobs for identifying and removing old documents from long-lived indices reducing index disk sizes 85% or more
- Major improvements to robustness and reliability of critical internal WCF location geocoding and distance routing service while introducing large refactors and increasing unit test coverage from less than 250 to over 1500
- Reduced requests to external service by 99% (200K/day to 2K/day)
- Researched and authored comprehensive service documentation
- Designed protocol and process for deprecating WCF service methods

### **ABB Corporate Research**, *Visiting Researcher & Research Developer*

January 2015 – February 2016 | Raleigh, NC, USA

- Created & lead project to reduce interruptions of knowledge workers
- Maintained web service for hundreds of internal users

### **University of Alabama**, *Graduate Research Assistant*

Fall 2014 | Tuscaloosa, AL, USA

- Performed research related to Software Security
- NSA Grant: “Growing the Science of Security Through Analytics”

### **University of Alabama**, *Graduate Teaching Assistant*

Spring 2013 – Spring 2014 | Tuscaloosa, AL, USA

- Taught 1<sup>st</sup> & 2<sup>nd</sup> year students
- Courses: Programming II & Software Engineering

### **University of Alabama**, *Undergraduate Research Mentor*

Summer 2011 – Spring 2014 | Tuscaloosa, AL, USA

- Lead & mentored undergraduates on various research projects in Research Experience for Undergraduates program
